

This new patent-pending coupling is a real game changer.

This coupling will give the installer the option to run the drain line over the unit access panels. With the old method you could not achieve this, because it would require cutting the drain line to maintenance the unit.

Using this AC DRAIN coupling, you can remove the drain system by simply unscrewing the coupling and taking the entire drain line to the truck, blow it clean, and replace, (game changer).

*GAME CHANGER*

Glued entry system requires cutting to remove drain system

## AC DRAIN
